

**DOME CORPORATION
OF NORTH AMERICA**

THE PERFECT BLEND

Quality. Economy. Performance.

**Improve your operating efficiency ... *and* your bottom line ...
with a fertilizer blending facility designed by Dome**

Dome Corporation of North America has engineered and built some of the best-performing and most modern wholesale fertilizer-blending facilities in operation today. Facilities that ...

- Go up faster and last longer
- Cost less to construct and less to maintain
- Contribute to the efficiency of your operation

Prefabricated for high quality and fast construction

Because our building components are pre-engineered and fabricated in a quality-controlled environment, we can provide you with a better building ... faster ... and for less money. Building elements drop seamlessly into place and bolt together like clockwork, enabling us to complete your project in a fraction of the time it would take using conventional methods.

Clear-span designs maximize capacity and efficiency

Our buildings are engineered to provide high clearances and unobstructed clear spans, with no need for internal supports, beams or pillars. This maximizes your storage space and makes loading and unloading faster and easier. Plus, there's less potential for damage or injuries caused by equipment collisions with building supports.

Tailored to your needs

Building layouts and equipment are designed to meet the unique needs of your operation for receiving and load-out, storage capacity, material handling and segregation, adaptability, and future expansion.

Built for lasting, low-maintenance performance

Buildings by Dome are fabricated from the strongest, most durable and corrosion-resistant materials available and built to meet the most stringent building codes.

With features like sealed reinforced concrete retaining walls, glulam arches, 40-year shingles and hot-dipped galvanized structural steel, our buildings are able to withstand high material pressures, heat, humidity, driving rain and winter snow. Simply put, they're built to last longer and perform better.

A Dome-built facility will protect your fertilizer investment from the elements, prevent leaching and safeguard the environment. Your crew will spend less time on routine maintenance. And you'll spend less money on building upkeep.

CHS, Inc.
Wholesale Crop Nutrient Distributor
Glyndon, Minnesota

“The new fertilizer blending building Dome Corporation built for us is a great addition to our facility. Not only is this building very attractive and well engineered, it also is very functional for our needs. The crew that erected this building was highly experienced and offered ideas to make the building even more desirable for our operations. This building absolutely will stand the test of time.”

– **Bob Nelson, Manager**

Turnkey service

With Dome, you get more than a builder. You get the expert services of our entire design-build and project management team. We can coordinate, oversee and implement every aspect of your project – from design to completion – saving you time *and* money.
